To whom it may concern

During my work as a lecturer at Sheffield University, Mr. Mohammed A. Alshankyty was under my supervision as follows:

- His Bachelor's degree final year project in 1975 was on frame analysis using the Stiffness and Flexibility Methods. He wrote his own program using Fortran IV language. I was his supervisor.
- His Master's degree thesis in 1977 was on Lateral Torsional Stability of steel I cantilever beams. He wrote his own program using Fortran IV language. I was his supervisor. His work resulted in publishing a joint paper with him.

This reference was given on his request.
